File Tree

```
80cols_grep/  
└─ 80cols.grep  (to submit)
```

Authorized commands : You are only allowed to use the following commands

- grep

Reminder : Grant execution permission to your scripts before pushing them

1 Goal

This exercise's goal is to display, from a given file, lines that have strictly more than 80 characters, including line breaks. The tabulation must be considered as any other character. Thus, it counts as only one character. A line will always end with a line break.

This must only be done via a `grep` script.

Consider that the way you execute your scripts will always be similar to the following example, and will always be valid.

2 Example

```
42sh$ cat test.txt  
This is a short line.  
This is a very long line, maybe the longest line we have ever seen in this subject!  
This is another short line.  
42sh$ grep -f 80cols.grep test.txt  
This is a very long line, maybe the longest line we have ever seen in this subject!
```

The way is lit. The path is clear. We require only the strength to follow it.
